Summary

Air Quality in Cork City is generally good but is impacted by residential solid fuel burning and traffic.

Air Quality in Cork City is generally good but deteriorates during winter months and at heavy traffic points.

Emissions of fine particulate matter (PM_{2.5}) from burning solid fuels for home heating and from road traffic emissions (nitrogen dioxide, NO₂) are the main contributors to poor air quality.

Air monitoring carried out by the Environmental Protection Agency (EPA) and Cork City Council (CCC) in 2022 revealed that air pollution is within the current EU legal limits.

Live Air Quality monitoring for Cork City
<https://corkairquality.ie/>

Air Pollution and Health

Air pollution is the single biggest environmental threat to human health, causing 1,300 premature deaths every year in Ireland (European Environment Agency, 2021).

In Cork City, this equates to 60 premature deaths every year, 116 for Cork County.

Health conditions related to air pollution include chronic and acute respiratory diseases, lung cancer, stroke and heart disease.

Meeting the new WHO Air Quality guidelines will be a major challenge for society. Ireland and Europe are aiming to move towards achieving the health based WHO Air Quality guidelines.

How can we improve the air we breathe?

Cleaner journeys

Clean public transport systems

Recharge network for electric vehicles should be expanded

Pedestrian and cycle-friendly networks

Low-emission zones

Walk, cycle and use public transport

Cleaner heating

More energy efficient buildings

City or district heating

Restrictions on solid fuel use systems

Updating of old heating systems

Consider: Do I really need to light a fire? Use cleaner heating sources if possible.

Section 1 - Introduction - Key Air Pollutants

In Ireland, particulate matter (PM) from residential heating and Nitrogen dioxide (NO_2) from traffic are the two air pollutants most significant to our health.

Particulate Matter (PM)

What is it? Particulate matter is a small solid or liquid particle. PM_{10} includes particles less than $10\ \mu\text{m}$ in diameter, $\text{PM}_{2.5}$ includes particles less than $2.5\ \mu\text{m}$ in diameter.

Where does it come from? The main source of fine particulate matter ($\text{PM}_{2.5}$) in Cork and Ireland is the burning of solid fuel for home heating (peat, coal, wood).

Why is it harmful? $\text{PM}_{2.5}$ is the air pollutant **most harmful to our health**. These particles are small enough to infiltrate deep into the lungs, causing respiratory damage, stroke and cardiovascular disease.

When does it cause the most harm? High $\text{PM}_{2.5}$ levels are of concern during winter as many houses in Cork city rely on solid fuels for home heating.

How big is particulate matter? Find out on the next page.

$1\ \mu\text{m}$ = one micrometre = one millionth of a metre ($1 \times 10^{-6}\text{m}$)

Graphics: EPA, 2022

Nitrogen Dioxide (NO_2)

What is it? Nitrogen Dioxide (NO_2) is an air pollutant in gaseous form.

Where does it come from? NO_2 is emitted by internal combustion engines, such as petrol and diesel cars.

Why is it harmful? NO_2 is damaging to our lungs and exacerbates conditions such as asthma and emphysema. It can also affect the liver and spleen.

When does it cause the most harm? High concentrations of NO_2 are associated with high volumes of traffic. Everyday exposure to NO_2 occurs if people are living, walking, cycling or driving in and near traffic.

Particle Matter 2.5µm – Size Comparison

Image: US EPA

Section 2 - Air Quality Monitoring in Cork City

Air Quality in Cork City is measured by the Environmental Protection Agency and by Cork City Council.

Cork City Council's Particulate Matter Air Quality Monitoring Network

In addition to the EPA monitoring network, Cork City Council developed [Ireland's first citywide network of PM_{2.5} sensors](#) together with the Centre for Research into Atmospheric Chemistry at University College Cork.

The PM_{2.5} sensor network provides a cost-effective method for displaying real-time indicative information about air quality in different areas of the city.

Local, live data (averaged and updated every 15 minutes) is available at <https://corkairquality.ie>.

The air quality data provided on the network can assist citizens, including at-risk groups, to make informed decisions and manage their exposure to outdoor air pollution.

The PM_{2.5} values displayed on the dashboard are indicative; however, they are highly correlated with EPA reference measurements. A colour coding scheme is utilised to describe the air quality in the area at a particular time.

A description of the colour coding is provided on the next page.

Environmental Protection Agency (EPA) Monitoring Network

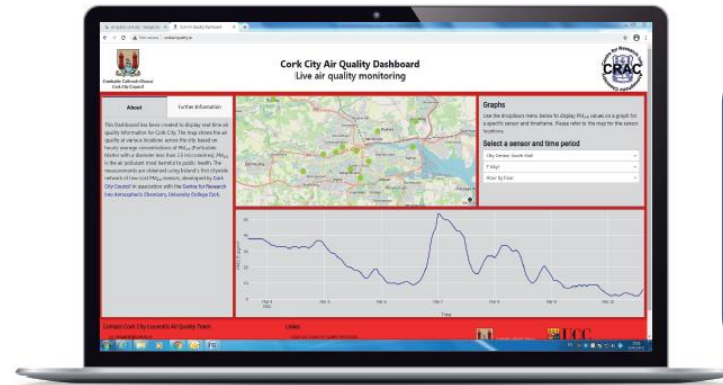

The EPA air quality monitoring network is used for national and EU regulatory reporting purposes.

The network consists of reference-scale, high-end instrumentation, measuring a range of parameters (ozone, PM_{2.5}, PM₁₀, nitrogen oxides and sulphur dioxide).

EPA monitoring stations in Cork are located at the South Link Road, Heatherton Park, University College Cork (UCC), Munster Technological University (MTU) and the Lower Glanmire Road.

Access EPA Air Quality data for Ireland at www.airquality.ie

Colour Code Scheme - Cork City Air Quality Dashboard

Colour	Explanation*	PM _{2.5} (µg/m ³)	
		From	To
	Good	0	10
	Acceptable	11	35
	Moderate	36	53
	Poor	54	70
	Very Poor	71	+

Explanation*

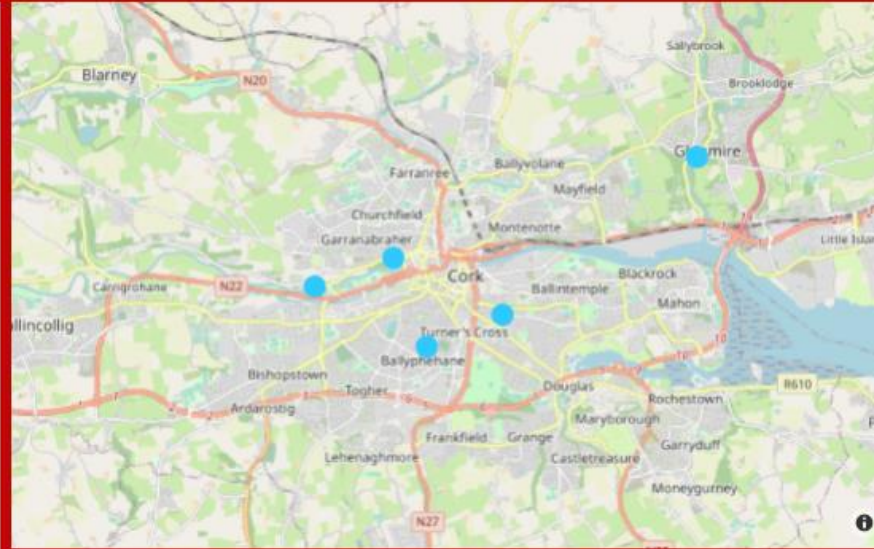

These descriptions of air quality refer to pollution levels over a timescale limited to a few hours. For regulatory purposes, PM_{2.5} concentrations are based on annual averages. The EU annual average limit for PM_{2.5} is 20µg/m³. The WHO recommends a significantly lower annual average level of 5µg/m³

Feedback

We welcome your feedback and suggestions for improvements to this Air Quality Dashboard.

Section 3 - WHO and EU Air Quality Guidelines

Levels of NO_2 and PM_{10} were within EU legal limits in Ireland for 2022. They did however exceed the World Health Organization (WHO) Air Quality Guidelines for Health.

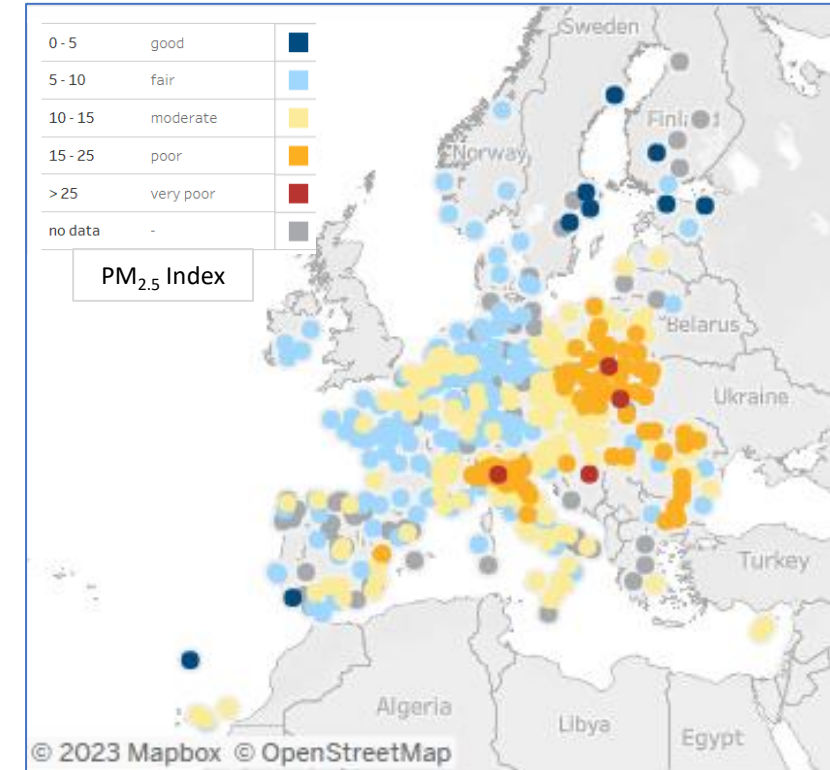

In order to protect our health, vegetation and ecosystems, the EU sets down air quality standards in Ireland and the other member states for a wide variety of pollutants.

As more research on the health effects of air pollution has emerged, the WHO has updated their air quality guidelines in 2021. The new targets are more stringent than previous WHO and EU levels. Accordingly, the EU limit values are currently under revision. Achieving the WHO Air Quality Guidelines is a major future challenge for Ireland and Europe.

The trigger levels for particulate matter ($\text{PM}_{2.5}$ and PM_{10}) and nitrogen dioxide (NO_2) as set by the EU and the WHO are laid out in the table below.

Table showing EU and WHO air quality guidelines.

Pollutant	Averaging Period	EU Regulatory Air Quality Limits (CAFE Directive)		WHO Health Based Air Quality Guidelines (2021)	
		Limit ($\mu\text{g}/\text{m}^3$)	Allowable Exceedances	Limit ($\mu\text{g}/\text{m}^3$)	Allowable Exceedances
$\text{PM}_{2.5}$	Annual	20	-	5	-
$\text{PM}_{2.5}$	24-hour	-	-	15	Not more than 3 – 4 days/year
PM_{10}	Annual	40	-	20	-
PM_{10}	24-hour	50	Not more than 35 days / year	50	Not more than 3 – 4 days/year
NO_2	Annual	40	-	10	-
NO_2	1-hour	200	Not more than 18 times / year	-	-
NO_2	24-hour	-	-	25	Not more than 3 – 4 days/year

Section 4 - Monitoring of Air Quality Parameters

A range of air quality parameters is measured to assess air quality in Cork city. These include particulate matter (PM₁₀ and PM_{2.5}) and nitrogen dioxide (NO₂).

4.1 EPA Regulatory Monitoring of PM₁₀ and NO₂

EU legal limits for NO₂ and PM₁₀ were not exceeded in 2022.

Exceedances of EU air pollution guidelines as per the 'Clean Air for Europe' (CAFE) directive are reported to the European Union by the Environmental Protection Agency (EPA).

Table showing exceedances of PM₁₀ and NO₂ at regulatory EPA monitoring stations.

Station Name	Number of Days with Exceedances in 2022		
	PM ₁₀ Days > 50 micrograms per metre cubed	NO ₂ > 200 micrograms per metre cubed (1h average)	NO ₂ > 40 micrograms per metre cubed (annual average)
UCC Distillery Fields	NA	0	0
Glanmire Road	NA	0	0
Heatherton Park	2	NA	NA
South Link Road	2	0	0
MTU Bishopstown	0	NA	NA
EU guidelines exceeded?	NO	NO	NO

A more detailed table can be viewed in Appendix A2.

This type of air quality monitoring for regulatory purposes is carried out by the EPA using reference-grade instruments.

For PM₁₀ (Particulate Matter smaller than 10 micrometres), the annual mean limit is 40 micrograms per metre cubed. The daily mean limit is 50 micrograms per metre cubed, and it is deemed breached if more than 35 exceedances occur during the year. In Cork City, the daily average limit of 50 micrograms per metre cubed for PM₁₀ was exceeded on 2 days in 2022 (16/12/2022 and 17/12/2022) but remained below the yearly limit of 35 exceedance days.

For NO₂, the annual limit is 40 micrograms per metre cubed (annual average) with an hourly limit of 200 micrograms per metre cubed. The limit is deemed breached if more than 18 exceedances of the one hour limit occur during the year. There were no exceedances of daily NO₂ limits in 2022.

AQ Data and Useful Links

Appendices

Diurnal Concentrations of NO₂ at EPA Regulatory Monitoring Stations in Cork City (2022 annual hourly average)

As can be noted from the graph above, NO₂ values tend to spike between the hours of 06:00 and 12:00 (morning commute). NO₂ levels rise again in the evening time between 14:00 and 20:00 (evening commute). The highest average NO₂ levels were recorded on the Lower Glanmire Road (average maximum of 32 µg/m³ at 09:00). A continuation of policies and measures to encourage a shift away from fossil fuels burning vehicles will result in a reduction of NO₂ levels with associated air quality improvements.

4.2 - Fine Particulate Matter (PM_{2.5}) - Cork City Air Quality Monitoring Network

Fine Particulate Matter (PM_{2.5}) levels were measured at 16 stations across Cork City Council's District-Scale Particulate Matter Air Quality Network in 2022. There were no exceedances of the EU trigger levels in 2022. However, PM_{2.5} levels spiked during cold months when solid fuels are burned to heat homes.

Table: PM_{2.5} levels as measured around Cork City. Data from 11 of the 16 stations are reported here, 5 stations were omitted due to incomplete data .

Station	PM _{2.5} (µg/m ³)				annual average	Exceed EU annual limit (20 µg/m ³)
	Seasonal averages					
	Spring Feb-Apr	Summer May-Jul	Autumn Aug-Oct	Winter Nov-Jan		
City Centre, Grattan Street	12	4	4	11	6	No
Fitzgerald's Park	6	1	2	4	3	No

Seasonal average PM_{2.5} levels for monitoring locations across Cork City

Grattan Street, Cork City Centre, 2022

The Annual Average for 2022 at this station is 6 µg/m³.

The seasonal averages are as follows:

- Winter: 11 µg/m³
- Spring: 12 µg/m³
- Summer: 4 µg/m³
- Autumn: 4 µg/m³

Seasonal hourly averaged PM_{2.5} at this station ranges from 0.7 - 26.7 µg/m³.

Summary of PM_{2.5} data from Cork City's District-Scale Monitoring Network

Air quality in Cork City, like elsewhere in Ireland, is broadly acceptable, but can deteriorate quickly during winter evenings as households burn solid fuel (peat, wood, coal) for heating.

On winter evenings, PM_{2.5} concentrations begin to rise at 15:00 due to solid fuel burning for residential heating purposes, peaking in the evening at 19:00. Particulate Matter levels start to flatten out and reduce after midnight.

PM_{2.5} maximum levels on winter evenings at stations throughout the city ranged from 11 to 37 µg/m³. The following maximum average hourly values were recorded:

- Grattan Street (27 µg/m³ at 19:00)
- Fitzgerald's Park (11 µg/m³ at 19:00)
- Lifetime Lab (15 µg/m³ at 21:00)
- Mayfield (24 µg/m³ at 18:00)
- Blackpool (37 µg/m³ at 21:00)
- Ballyphehane (27 µg/m³ at 21:00)
- Ballinlough (28 µg/m³ at 21:00)
- Blackrock (21 µg/m³ at 22:00)
- Blarney (16 µg/m³ at 23:00)
- Glanmire (25 µg/m³ at 21:00)
- Ballincollig (28 µg/m³ at 20:00)

The data from these stations highlights the impact of solid fuel burning during cold snaps and outlines the need for progressing household insulation upgrades as well as continuing the move towards installation of cleaner home heating systems.

4.3 Nitrogen Dioxide (NO₂) - Cork City NO₂ Air Quality Monitoring Network

Nitrogen Dioxide levels are mainly attributable to emissions from internal combustion engines, i.e. traffic emissions. NO₂ levels are measured at 5 stations in and around a designated Clean Air Zone in Cork City Centre. Traffic emissions are highest around busy roads, city quays and at traffic junctions.

NO₂ continuous monitoring (AirNodes sensors)

NO₂ levels are currently monitored within and around the Clean Air Zone.

NO₂ levels are highest during **peak morning and evening traffic hours** – between the hours of 7am – 10am and 5pm – 9pm.

Traffic emissions were **highest near Patrick’s Street**, a busy main road in the city centre.

During colder and wetter months, NO₂ levels rise as people use their cars more.

See a map of monitoring locations in Appendix A1.

NO₂ diffusion tube study October 2022

Over 700 citizen scientists took part in a study to assess the NO₂ levels across Cork in October 2022. NO₂ data was collected as part of the “Clean Air Together” project run by the EPA and An Taisce with assistance from Cork City Council. NO₂ diffusion sampling tubes were installed outside houses for a period of 30 days to measure traffic emissions around Cork City and suburbs.

The results revealed that most locations had “very good” or “good” NO₂ levels. Lower NO₂ values were associated with reduced traffic volumes towards the outer edges of the city and suburbs.

NO₂ levels from traffic emissions were highest adjacent to main roads, city quays and at busy traffic junctions. These were particularly acute along the Lower Glanmire Road, Ballyhooly Road, Commons Road, Carrigrohane Road Junction, South Mall and South Link Road.

See Appendix A4 for more details of the study.

What can we do about traffic pollution? See infographics on the following pages.

Reducing pollution from home heating (PM)

Reducing pollution from cars (NO₂)

Do you really need to light your open fire or stove?

Think 'ABC'!

- A – Ask yourself: "Do I really need to light a fire?"** Use other cleaner heating sources instead if possible.
- B – Burn cleaner,** more efficient, low-smoke fuels and make sure you use the right fuel for your appliance.
- C – Clean** and maintain your chimney and heating appliances at least once a year.

Think about each journey you make? Is there a cleaner alternative?

Walk or cycle it. You can save up to almost half the cost of a new bike and equipment through the Bike to Work scheme.

Bus or train it. Use public transport whenever possible.

For cleaner fuel choices, consult the EPA guide on the next page.

Consider Carpooling. Talk to colleagues and neighbours if this is an option for you.

Make your house more energy efficient and move to a clean form of home heating

Grants available from SEAI

Sustainable Energy Authority of Ireland (SEAI) operates a grant aided home energy & retrofitting scheme:
<https://www.seai.ie/grants/home-energy-grants/>

Work from home. If your workplace allows, consider working from home for part of your working week.

Go electric. If you can afford it, consider an electric or hybrid car for you next purchase.

Check out the Bike to Work Scheme:
<https://www.biketowork.ie/>

Heating your home and its impact on air quality and health

Section 6 - Air Quality Initiatives in 2022

The section below details the suite of air quality initiatives progressed in 2022 and outlines the progress in achieving the objectives and targets set out in Cork City Council's Air Quality Strategy (2021 – 2026).

6.1 Air Quality Projects Completed / Progressed in 2022

2022 was an exceptionally busy year for Cork City Council's air quality team. In addition to the works associated with the upkeep of the Particulate Matter monitoring network (sensor fixes, dashboard realignment), frequent stakeholder engagement (answering queries on air quality etc.), the following projects were launched and progressed.

Launch of Clean Air Zone and expanded NO₂ monitoring network in Cork City Centre

In April 2022, Cork City Council launched Ireland's first dedicated Clean Air Zone along Oliver Plunkett Street and its adjoining streets. The Clean Air Zone is an area where targeted action has been taken to improve air quality; specifically, through the reduction of traffic related air pollutants. As part of the initiative, five air quality monitors were installed in June 2022. The monitors measure nitrogen dioxide (NO₂) (emitted by petrol and diesel-burning vehicle engines), ozone and particulate matter.

The installation of these additional monitors throughout the area will form part of a study to demonstrate the air quality benefits in terms of health and wellbeing of Clean Air Zones; informing further discussions on the expansion and creation of future low emission areas across Cork City.

6.1 Air Quality Projects Completed / Progressed in 2022 (cont'd)

Participation in Cork Carnival of Science

On Saturday 11th and Sunday 12th June 2022, representatives from Cork City Council's Air Quality team took part in the annual Carnival of Science held at Fitzgerald's Park. The team were on hand to demonstrate real-time Air Quality readings from the city-wide monitoring network, provide details on Cork City's first Clean Air Zone and to give a glimpse at future developing projects.

Chambers Ireland
Sustainable
Environment Award
2022

Chambers Ireland Award

In November 2022, Cork City Council won the Chambers Ireland Sustainable Environment Award for their work on the Cork City Air Quality Strategy. The strategy outlines the actions that Cork City Council will undertake between 2021 and 2026 to reduce the concentration of air pollutants in the city area; thereby positively impacting the health and quality of life of residents and visitors.

Clean Air Together

In October 2022, more than 700 citizen scientists took part in the Clean Air Together (Cork City) project. The successful study, which relied on the engagement of the citizens of Cork City; measured levels of the harmful air pollutant Nitrogen Dioxide (NO₂) across all areas of the city and suburbs. The results of the study were presented at a public event, hosted by Cork City Council on Wednesday February 22nd, 2023. The project was led by the Environmental Protection Agency (EPA) and An Taisce's Environmental Education Unit with the support of Cork City Council's Air Quality Team.

6.2 Progress Towards Achieving Objectives and Targets

(as set out in Cork City Council's Air Quality Strategy 2021 – 2026)

Cork City Council
Air Quality Strategy 2021 – 2026
July 2021

Comhairle Cathrach Chorcaí
Cork City Council

Cork City Council's Air Quality Strategy outlines 7 major themes under which air quality objectives will be progressed, namely:

1. Health and Wellbeing
2. Air Quality Monitoring
3. Travel
4. Electric Vehicles and Charging Infrastructure
5. Regulation and Enforcement
6. Green Infrastructure
7. Research and Innovation

In all, there are 27 objectives with associated targets set out in the document.

Cork City Council's full Air Quality Strategy is available at
<https://www.corkcity.ie/en/council-services/services/environment/air-quality/air-quality-strategy.html>

Progress Towards Achieving Objectives and Targets (cont'd)

Theme 1 – Health and Wellbeing contains 2 objectives with 6 targets. Progress has been made on conducting an Air Quality survey among citizens and updating the City Council website regarding access to air quality information.

Theme 2 - Air Quality Monitoring contains 2 objectives with 3 targets. Progress has been achieved in the delivery of a local air quality monitoring network and associated interactive web-based dashboard.

Theme 3 - Travel contains 7 objectives with 32 targets. Progress has been achieved with the delivery of an expanded network of cycleways and enhanced pedestrianisation across the city.

Theme 4 - Electric Vehicles and Charging Infrastructure contains 1 objective with 5 targets. Progress has been achieved with the delivery of an expanded electric vehicle (EV) charging network across the city. In addition to this, the Cork City Council's fleet contains 76 electric vehicles.

Theme 5 - Regulation and Enforcement contains 6 objectives with 6 targets. Progress has been achieved in the upgrade of a significant quantity of the City Council's housing stock to low or near-zero emission heating systems. There is continued progress with inspections and compliance investigations for the Solid Fuel Regulations and continued investigations of air pollution complaints.

Theme 6 - Green Infrastructure contains 3 objectives with 11 targets. Progress has been achieved under this theme with the delivery of a new park (Marina Park) as well as upgrades to numerous parks across the city (Holland Park, Murphy's Farm Park and Playground). Cork City Council has also hired a Tree Officer and two Biodiversity Officers to aid the delivery of green infrastructure across the expanded city area.

Theme 7 - Research and Innovation contains 6 objectives with 6 targets. Progress has been achieved via the roll out of a dedicated Clean Air Zone in April 2022, launch of a district scale air monitoring network across the city for PM_{2.5} and the addition of 5 new NO₂ monitors in the city centre. There is also continued participation in air quality projects with external agencies such as UCC, Cork Healthy Cities and the EPA.

Appendix 5 details the status of all Objectives and Targets.

A3 - PM_{2.5}: Seasonal and daily trends

To demonstrate the differences in Air Quality in different parts of Cork city throughout the year, the graphs on the right show hourly values for the 21st of April, 21st June, 21st September and 21st December.

(note: April 2022 data applied due to sensor malfunction in March 2022)

PM_{2.5} levels are highest during the colder seasons. There is also a clear distinction between air quality in different locations. Air Quality in Fitzgerald's Park; which can be taken as a background location with cleaner air; is generally better than in residential areas such as Mayfield, Ballinlough, or the City Centre.

PM _{2.5} (µg/m ³) Seasonal Averages 2022					
Station	Spring Feb-Apr	Summer May-Jul	Autumn Aug-Oct	Winter Nov-Jan	Annual Average
City Centre, Grattan Street	12	4	4	11	6
Fitzgerald's Park	6	1	2	4	3
Lifetime Lab	9	3	3	10	7
Mayfield	14	4	5	11	8
Blackpool	16	4	5	18	11
Ballyphehane	10	3	3	13	7
Ballinlough	13	3	4	16	9
Blackrock Castle	13	4	3	12	8
Blarney	10	3	4	13	6
Glanmire	13	4	4	15	9

A4 – ‘Clean Air Together’ NO₂ diffusion tubes study October 2022

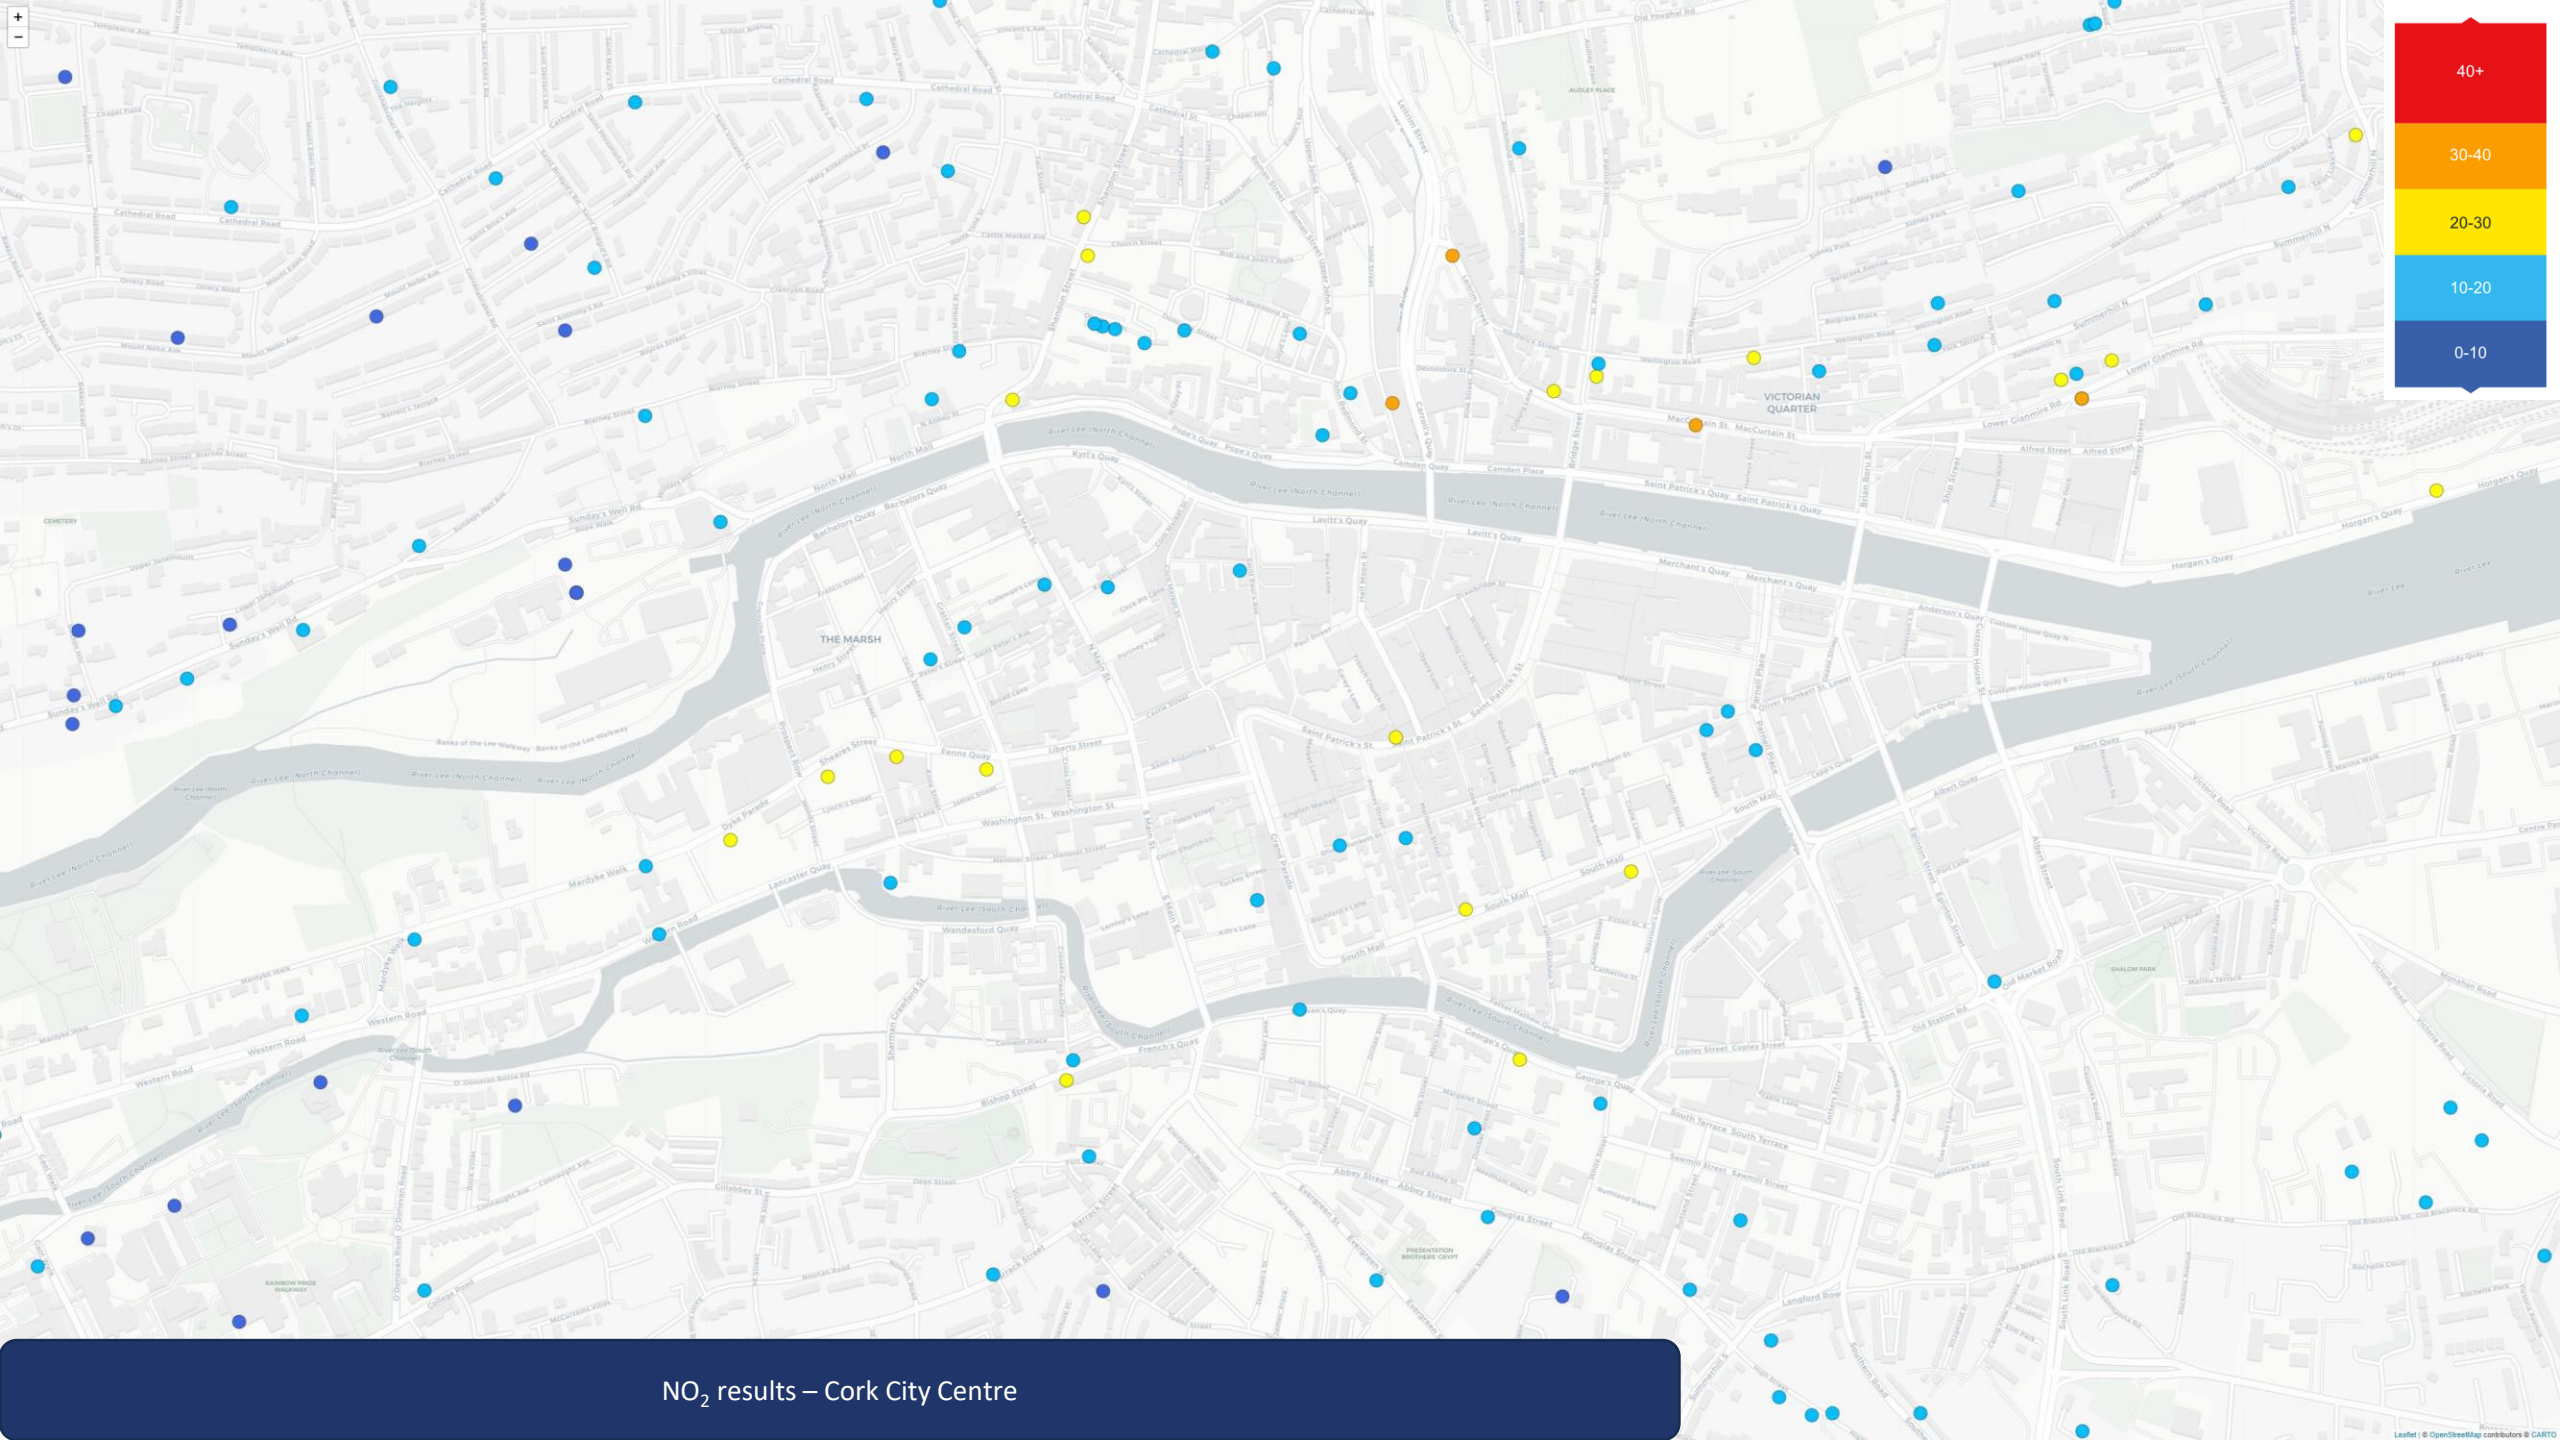

The Clean Air Together Project saw 700 citizen scientists measured Nitrogen Dioxide (NO₂) levels at different locations around Cork city continuously for over four weeks in October 2022. The project was led by the Environmental Protection Agency and An Taisce with the assistance from air quality scientists within Cork City Council. The map below shows the results for Cork City and Suburbs, ranging from low levels (dark blue, light blue) to medium (yellow) and higher (orange, red) levels of NO₂.

Results from the study revealed that over 90% of locations had low levels of NO₂. The highest NO₂ levels were found along national primary roads, namely:

- Lower Glanmire Road
- MacCurtain Street (N8)
- Commons Road
- Leitrim Street
- Carroll’s Quay (N20)
- South Link Road (N27)

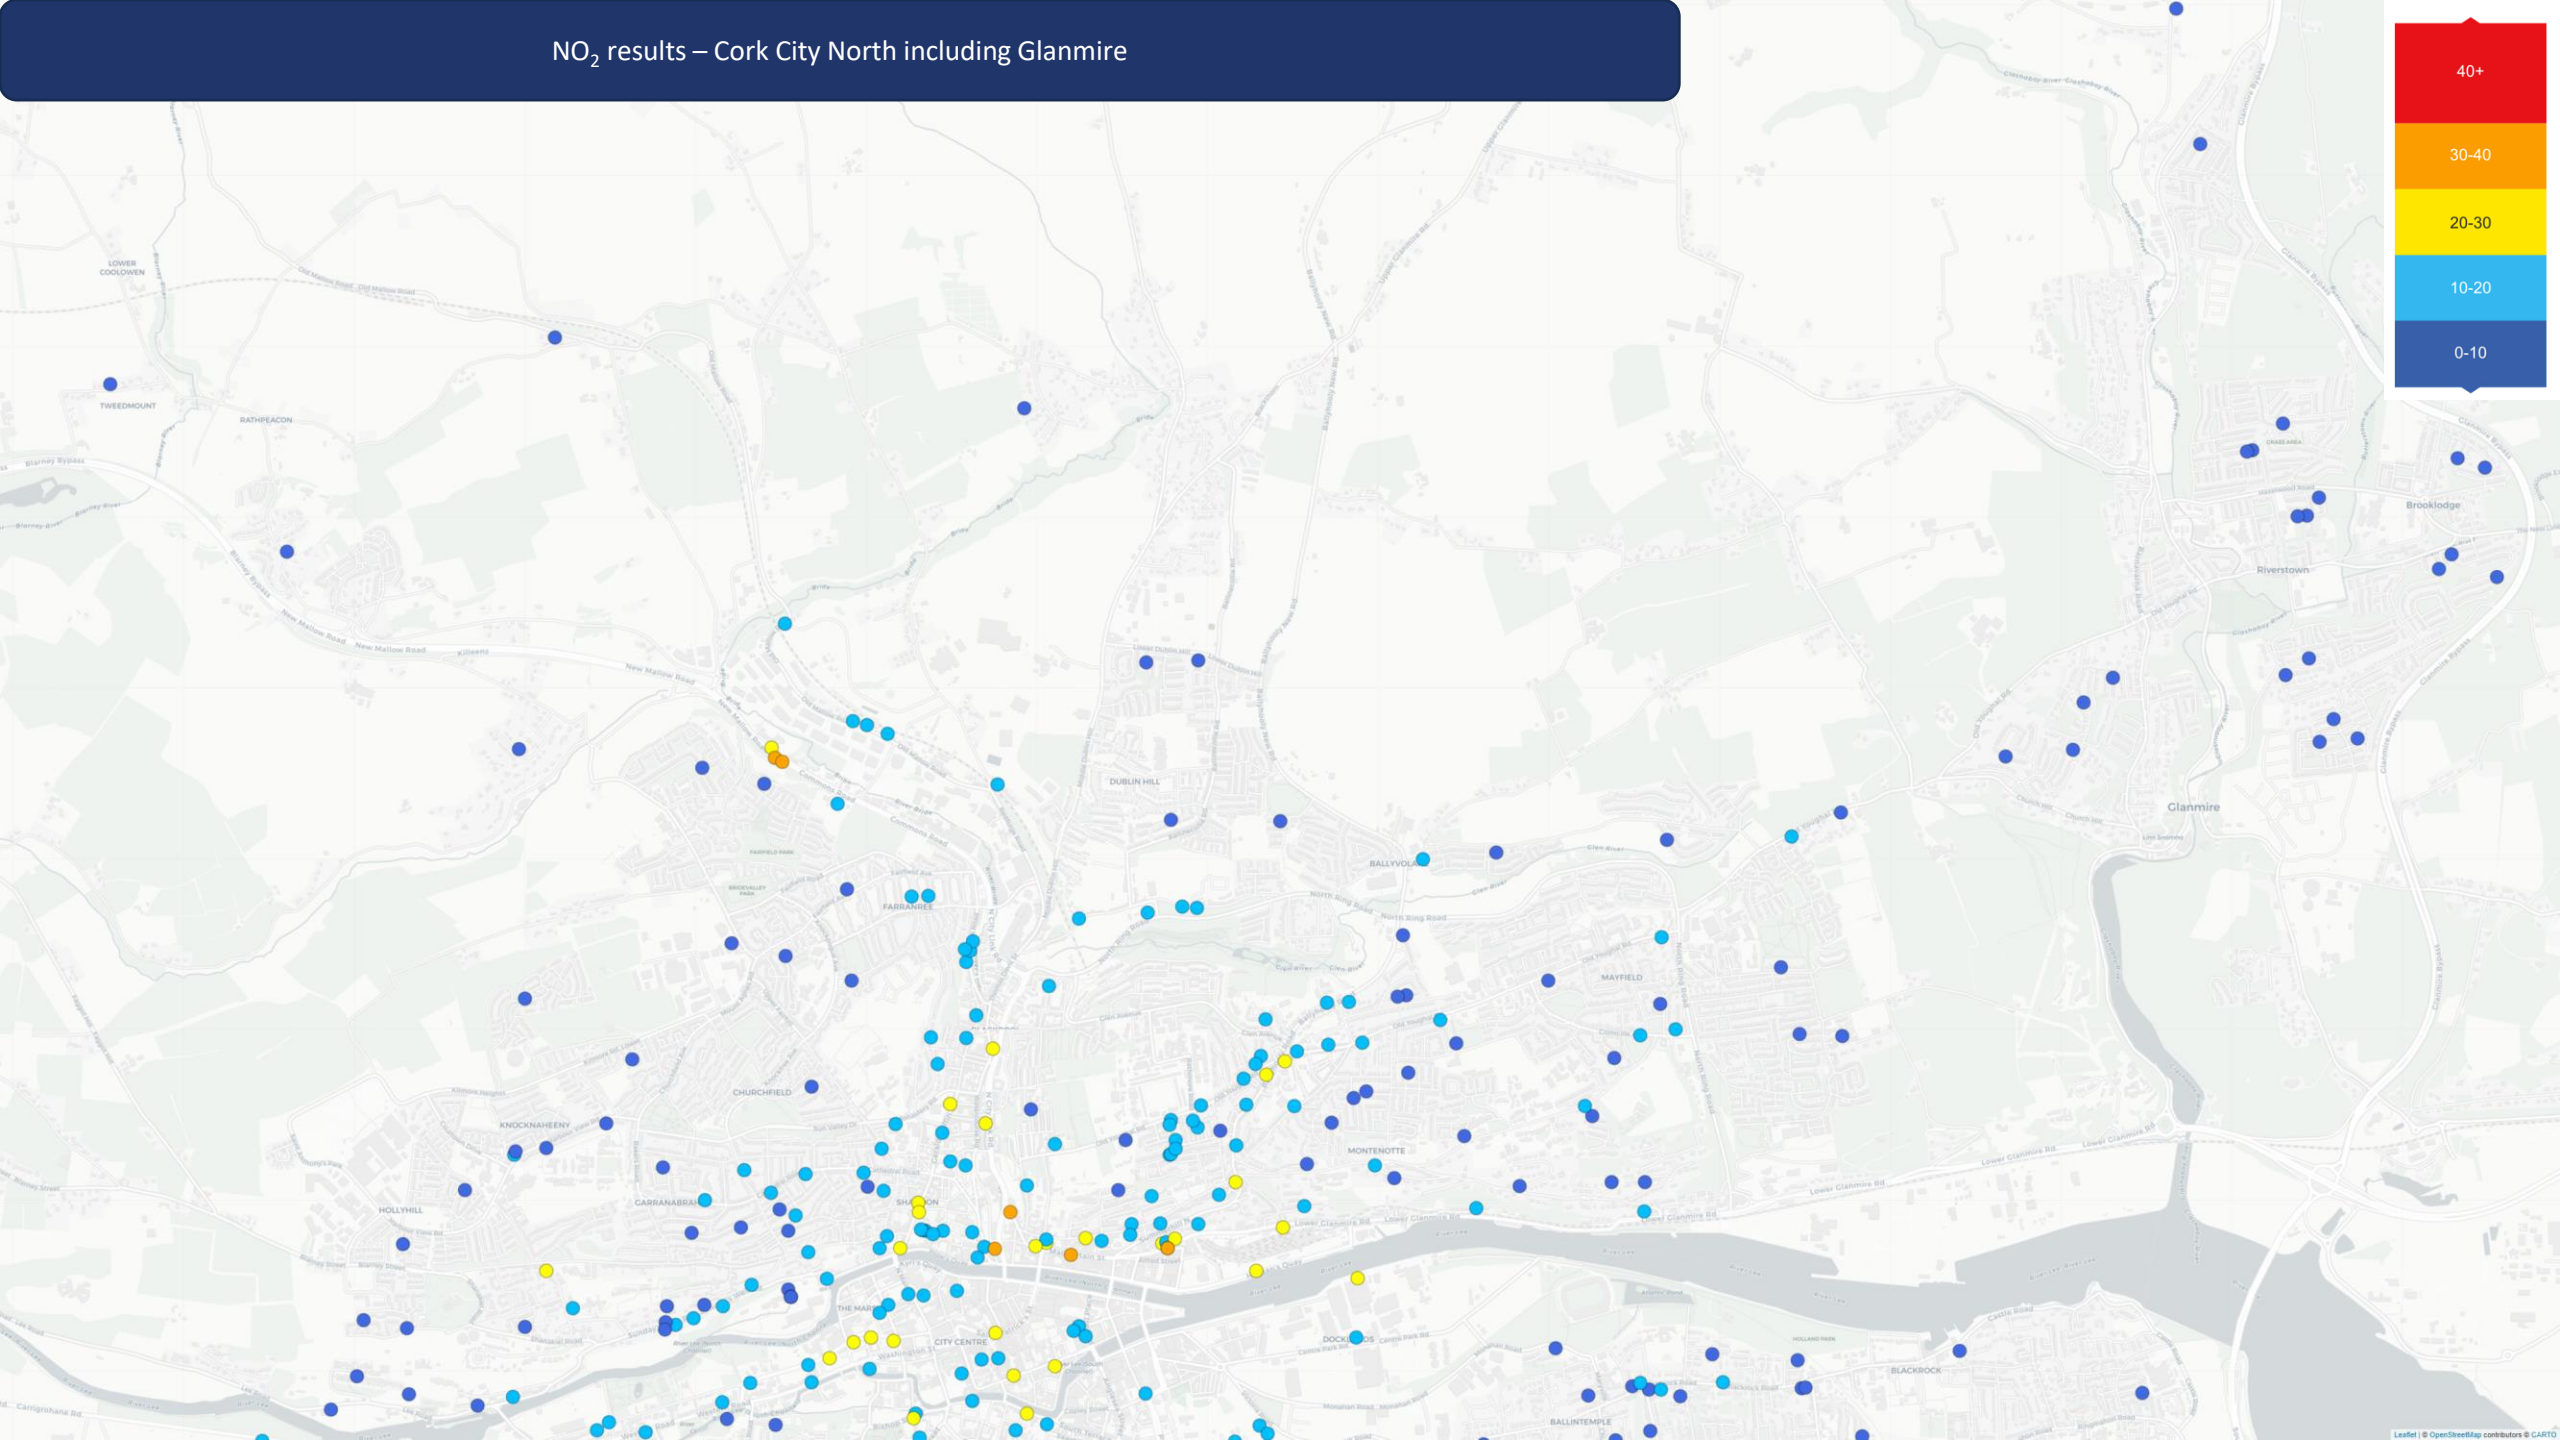

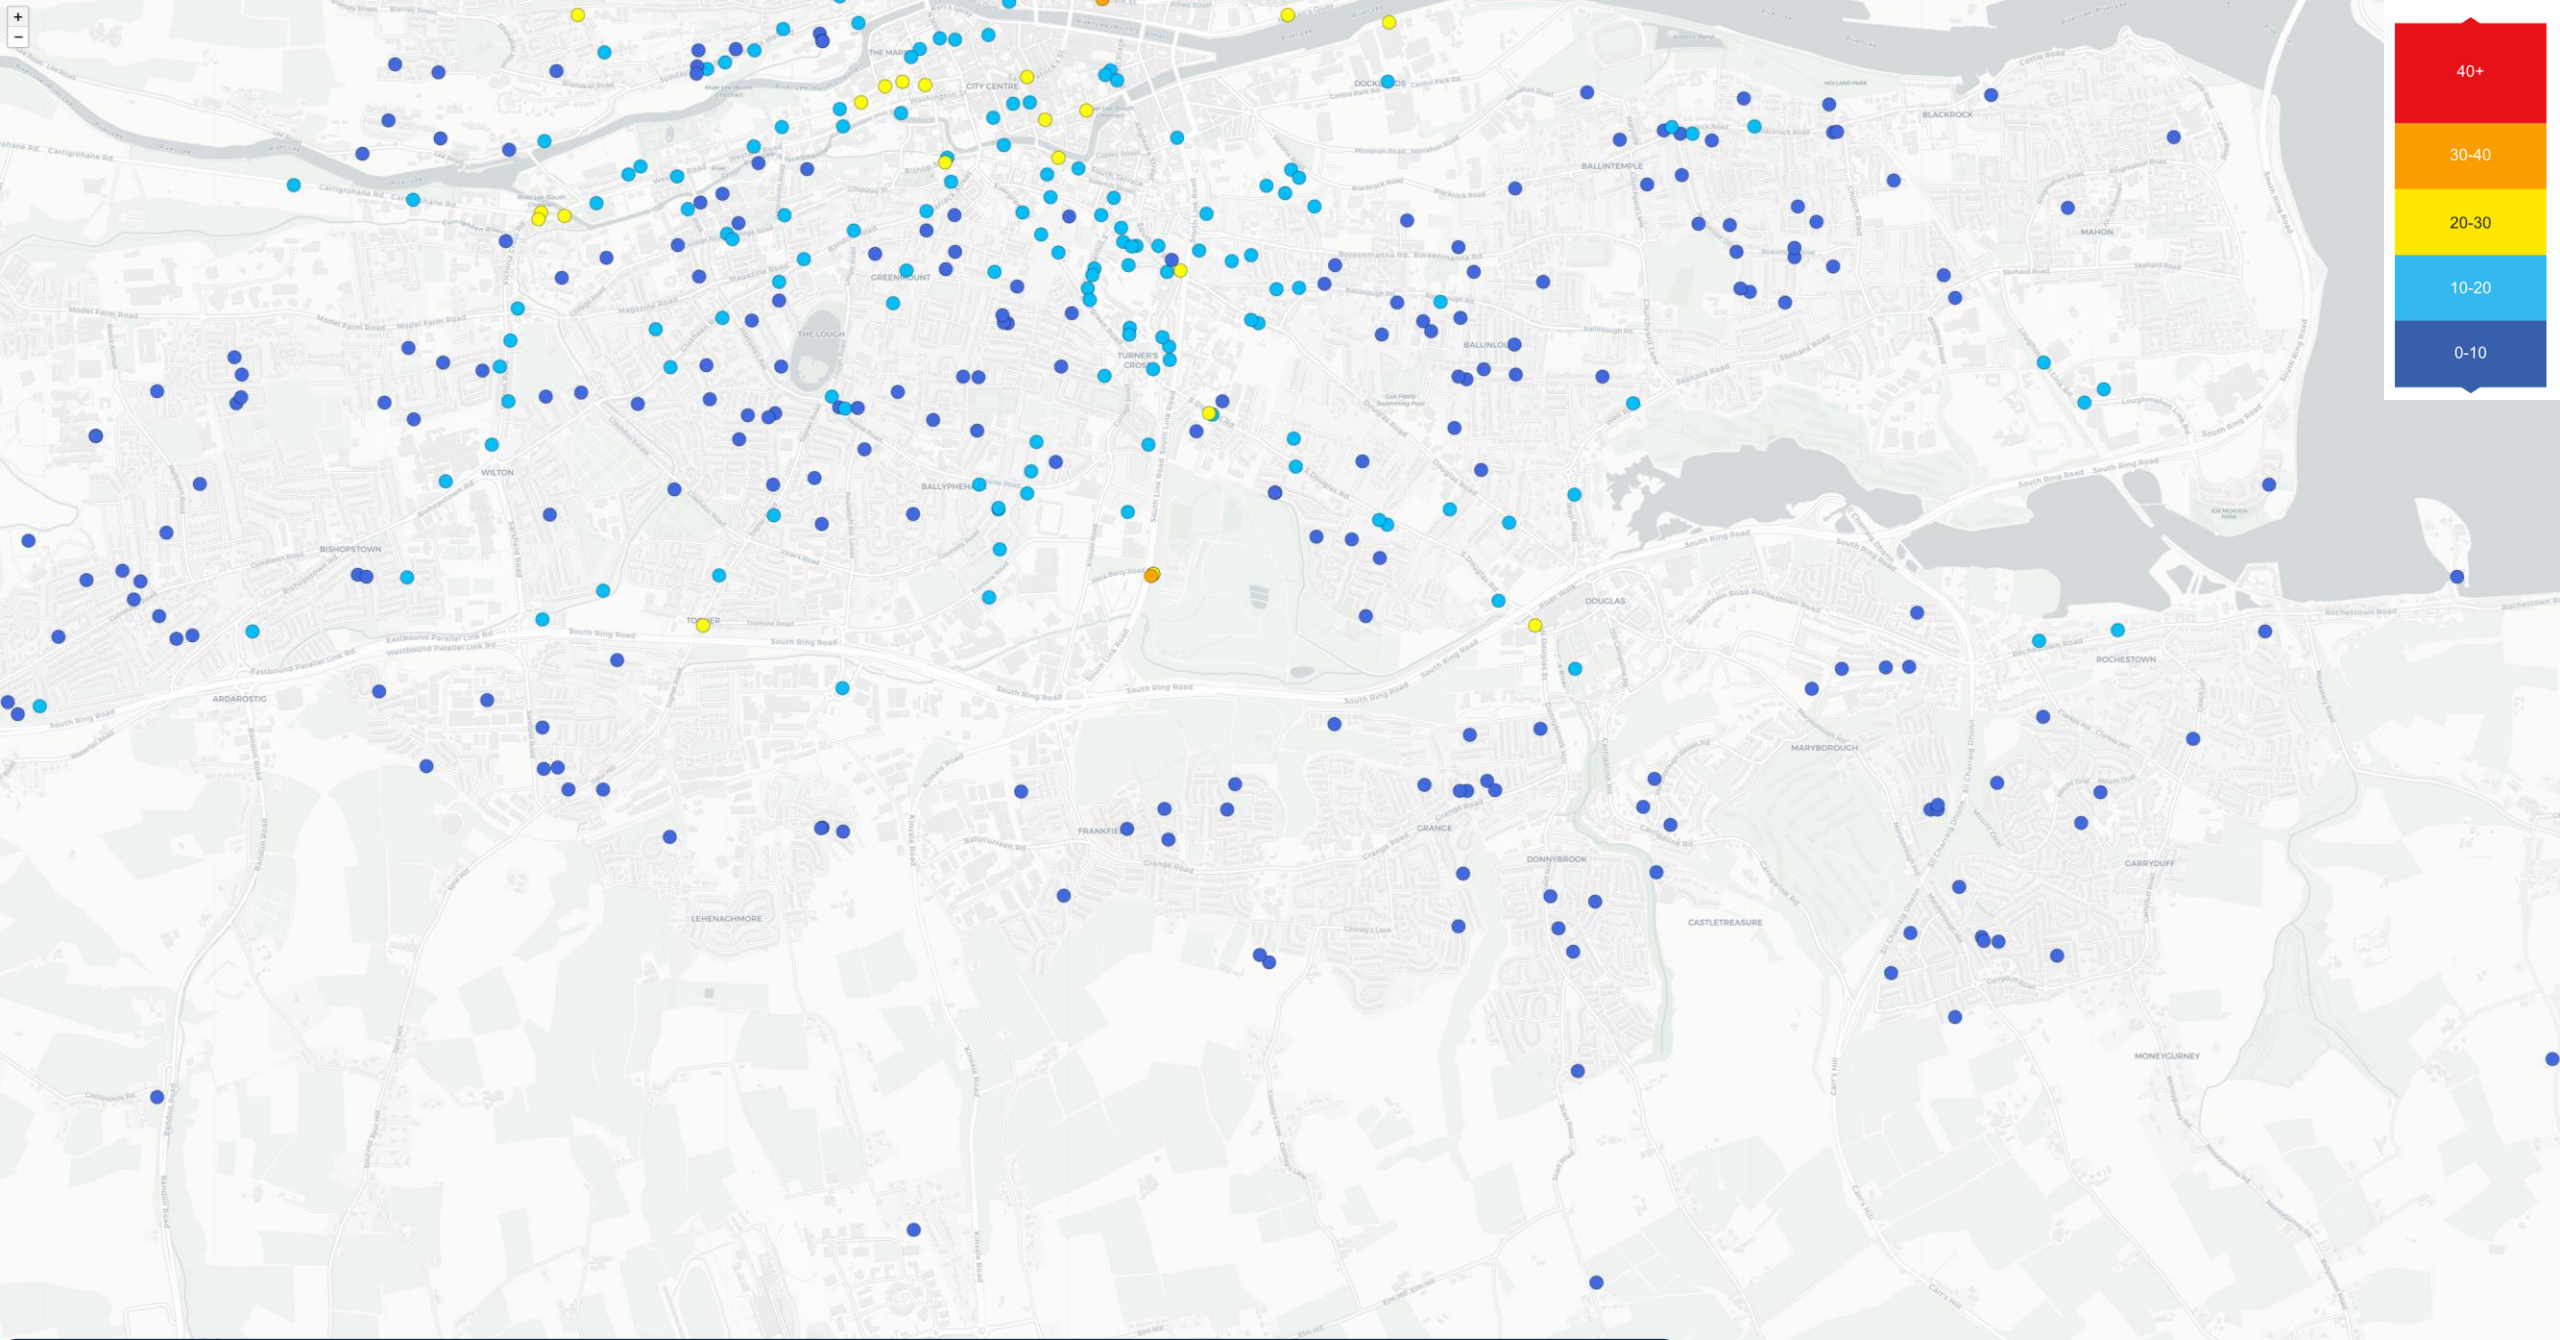

Visit the Clean Air Together Project website <https://www.cleanairtogether.ie/> to check NO₂ results in your neighbourhood.

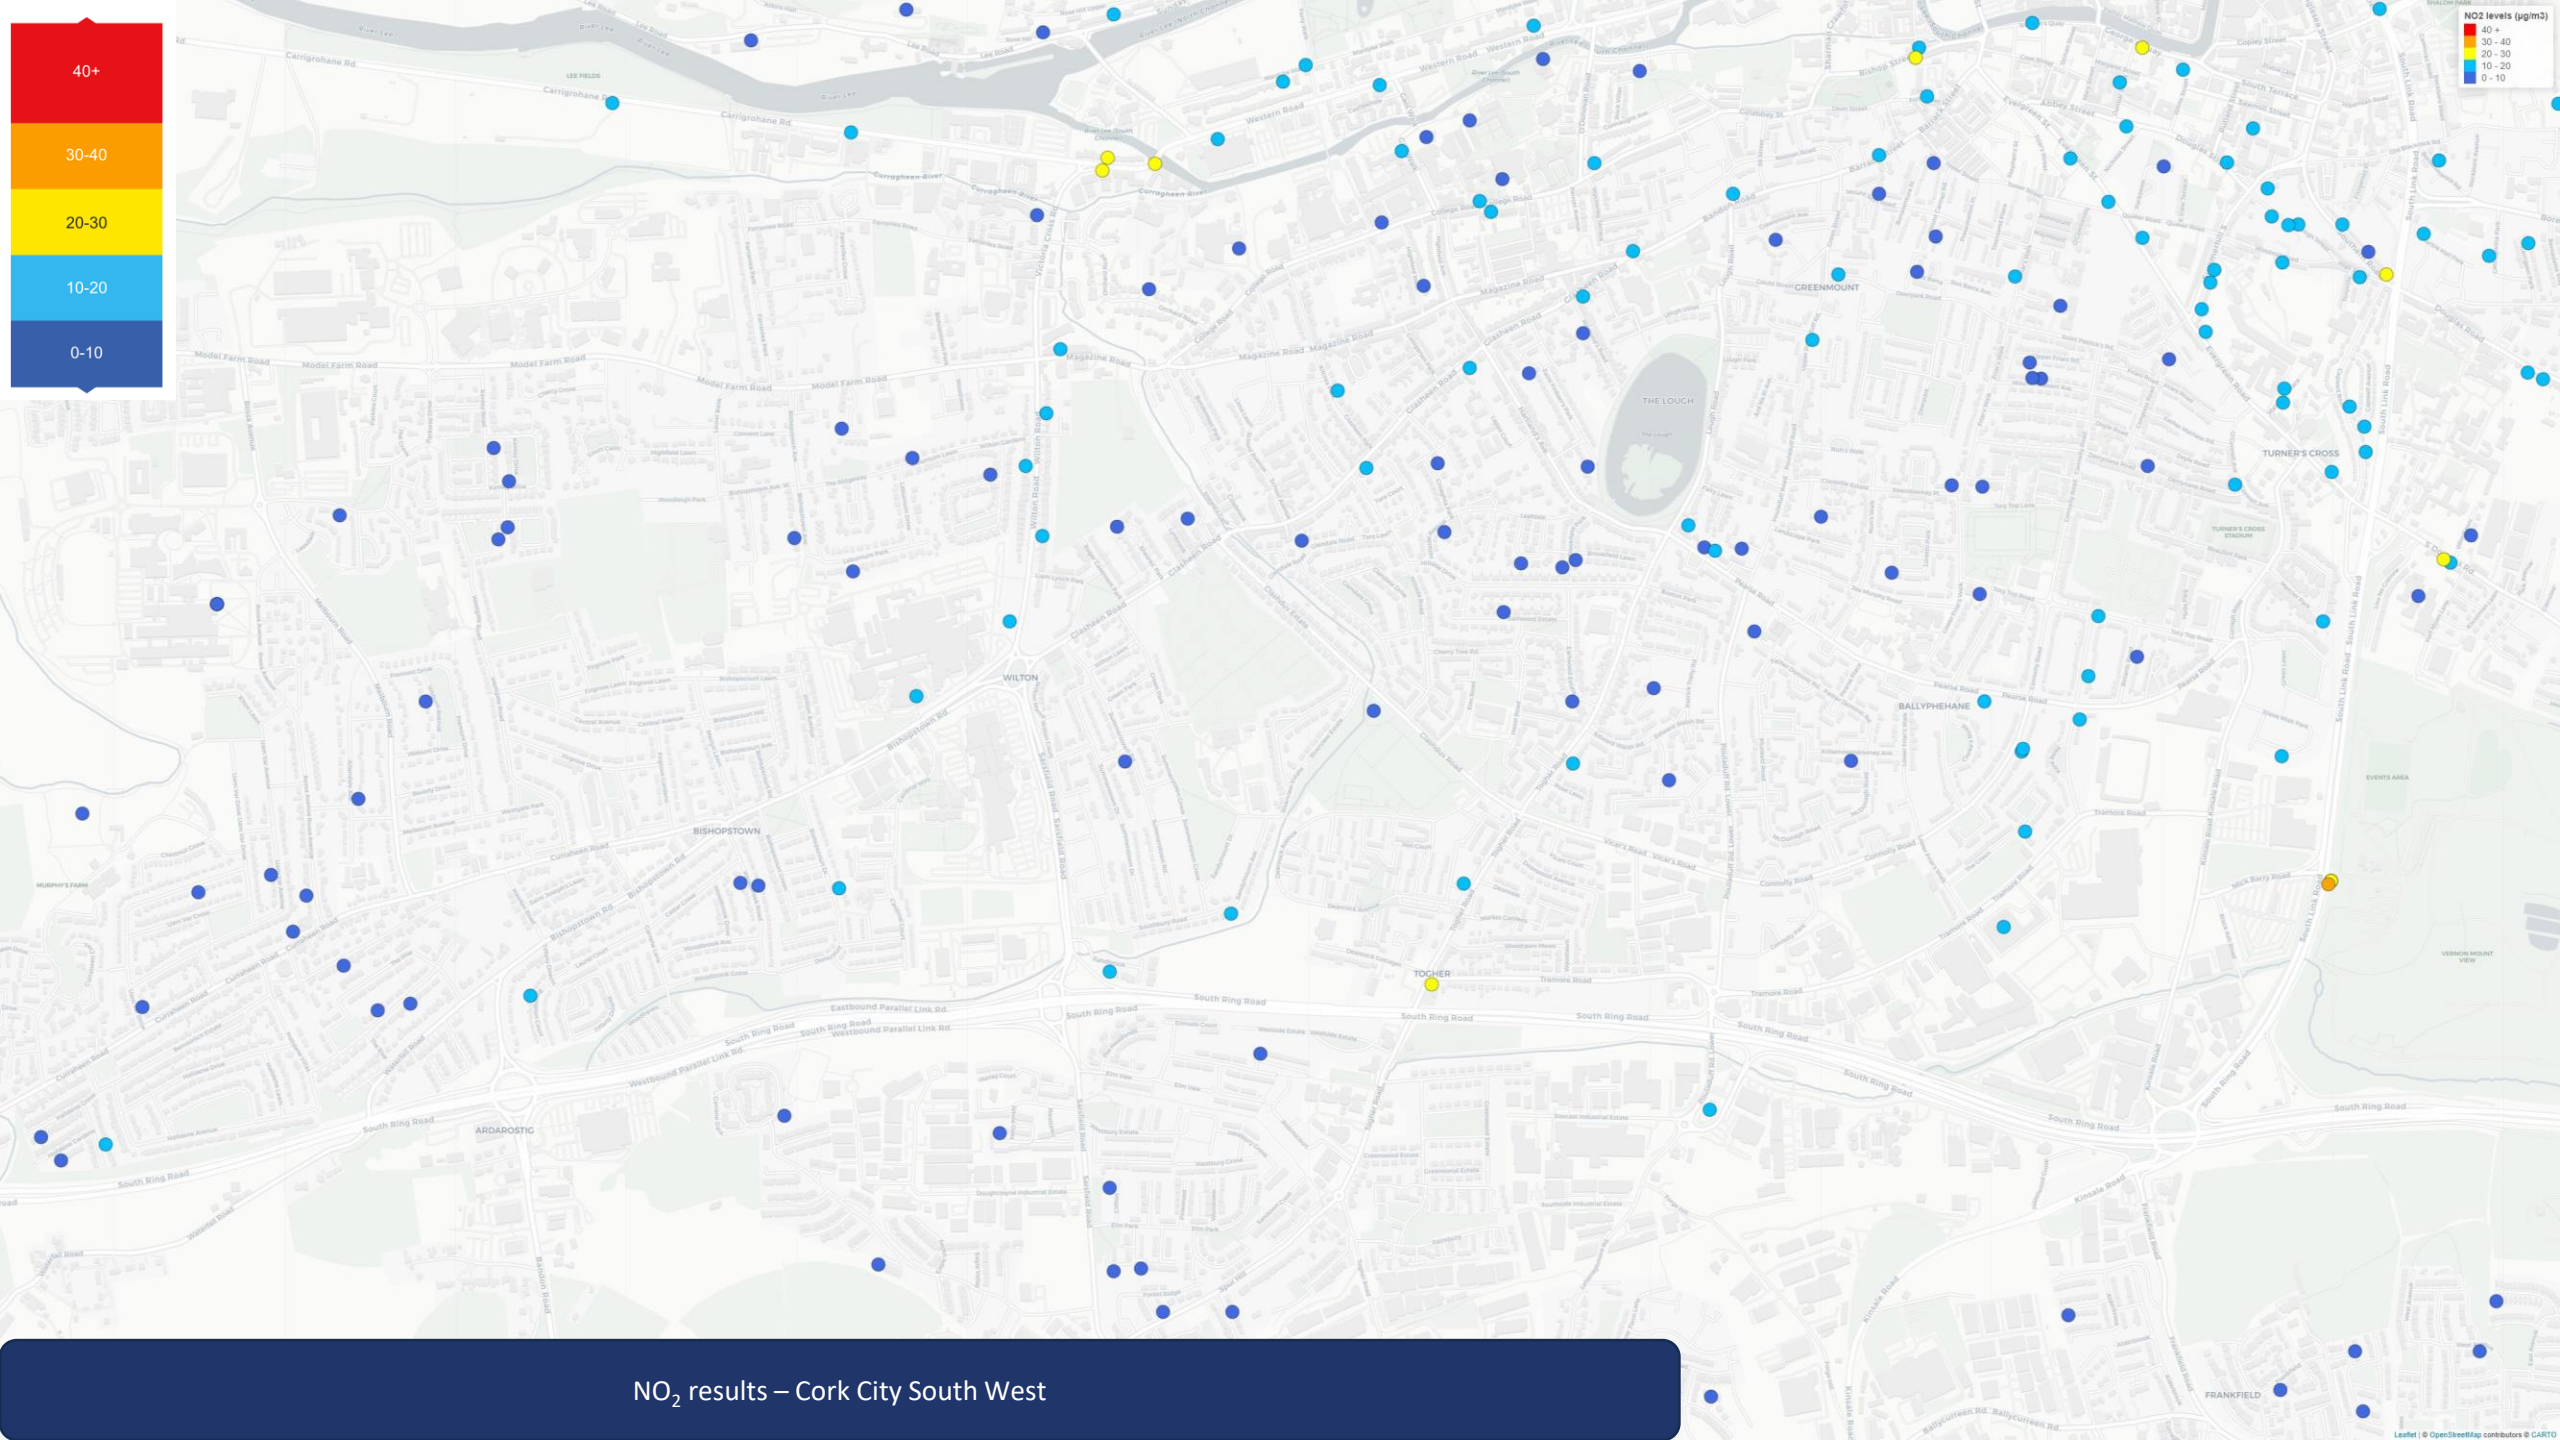

NO₂ results – Cork City Centre

NO₂ results – Cork City North including Glanmire

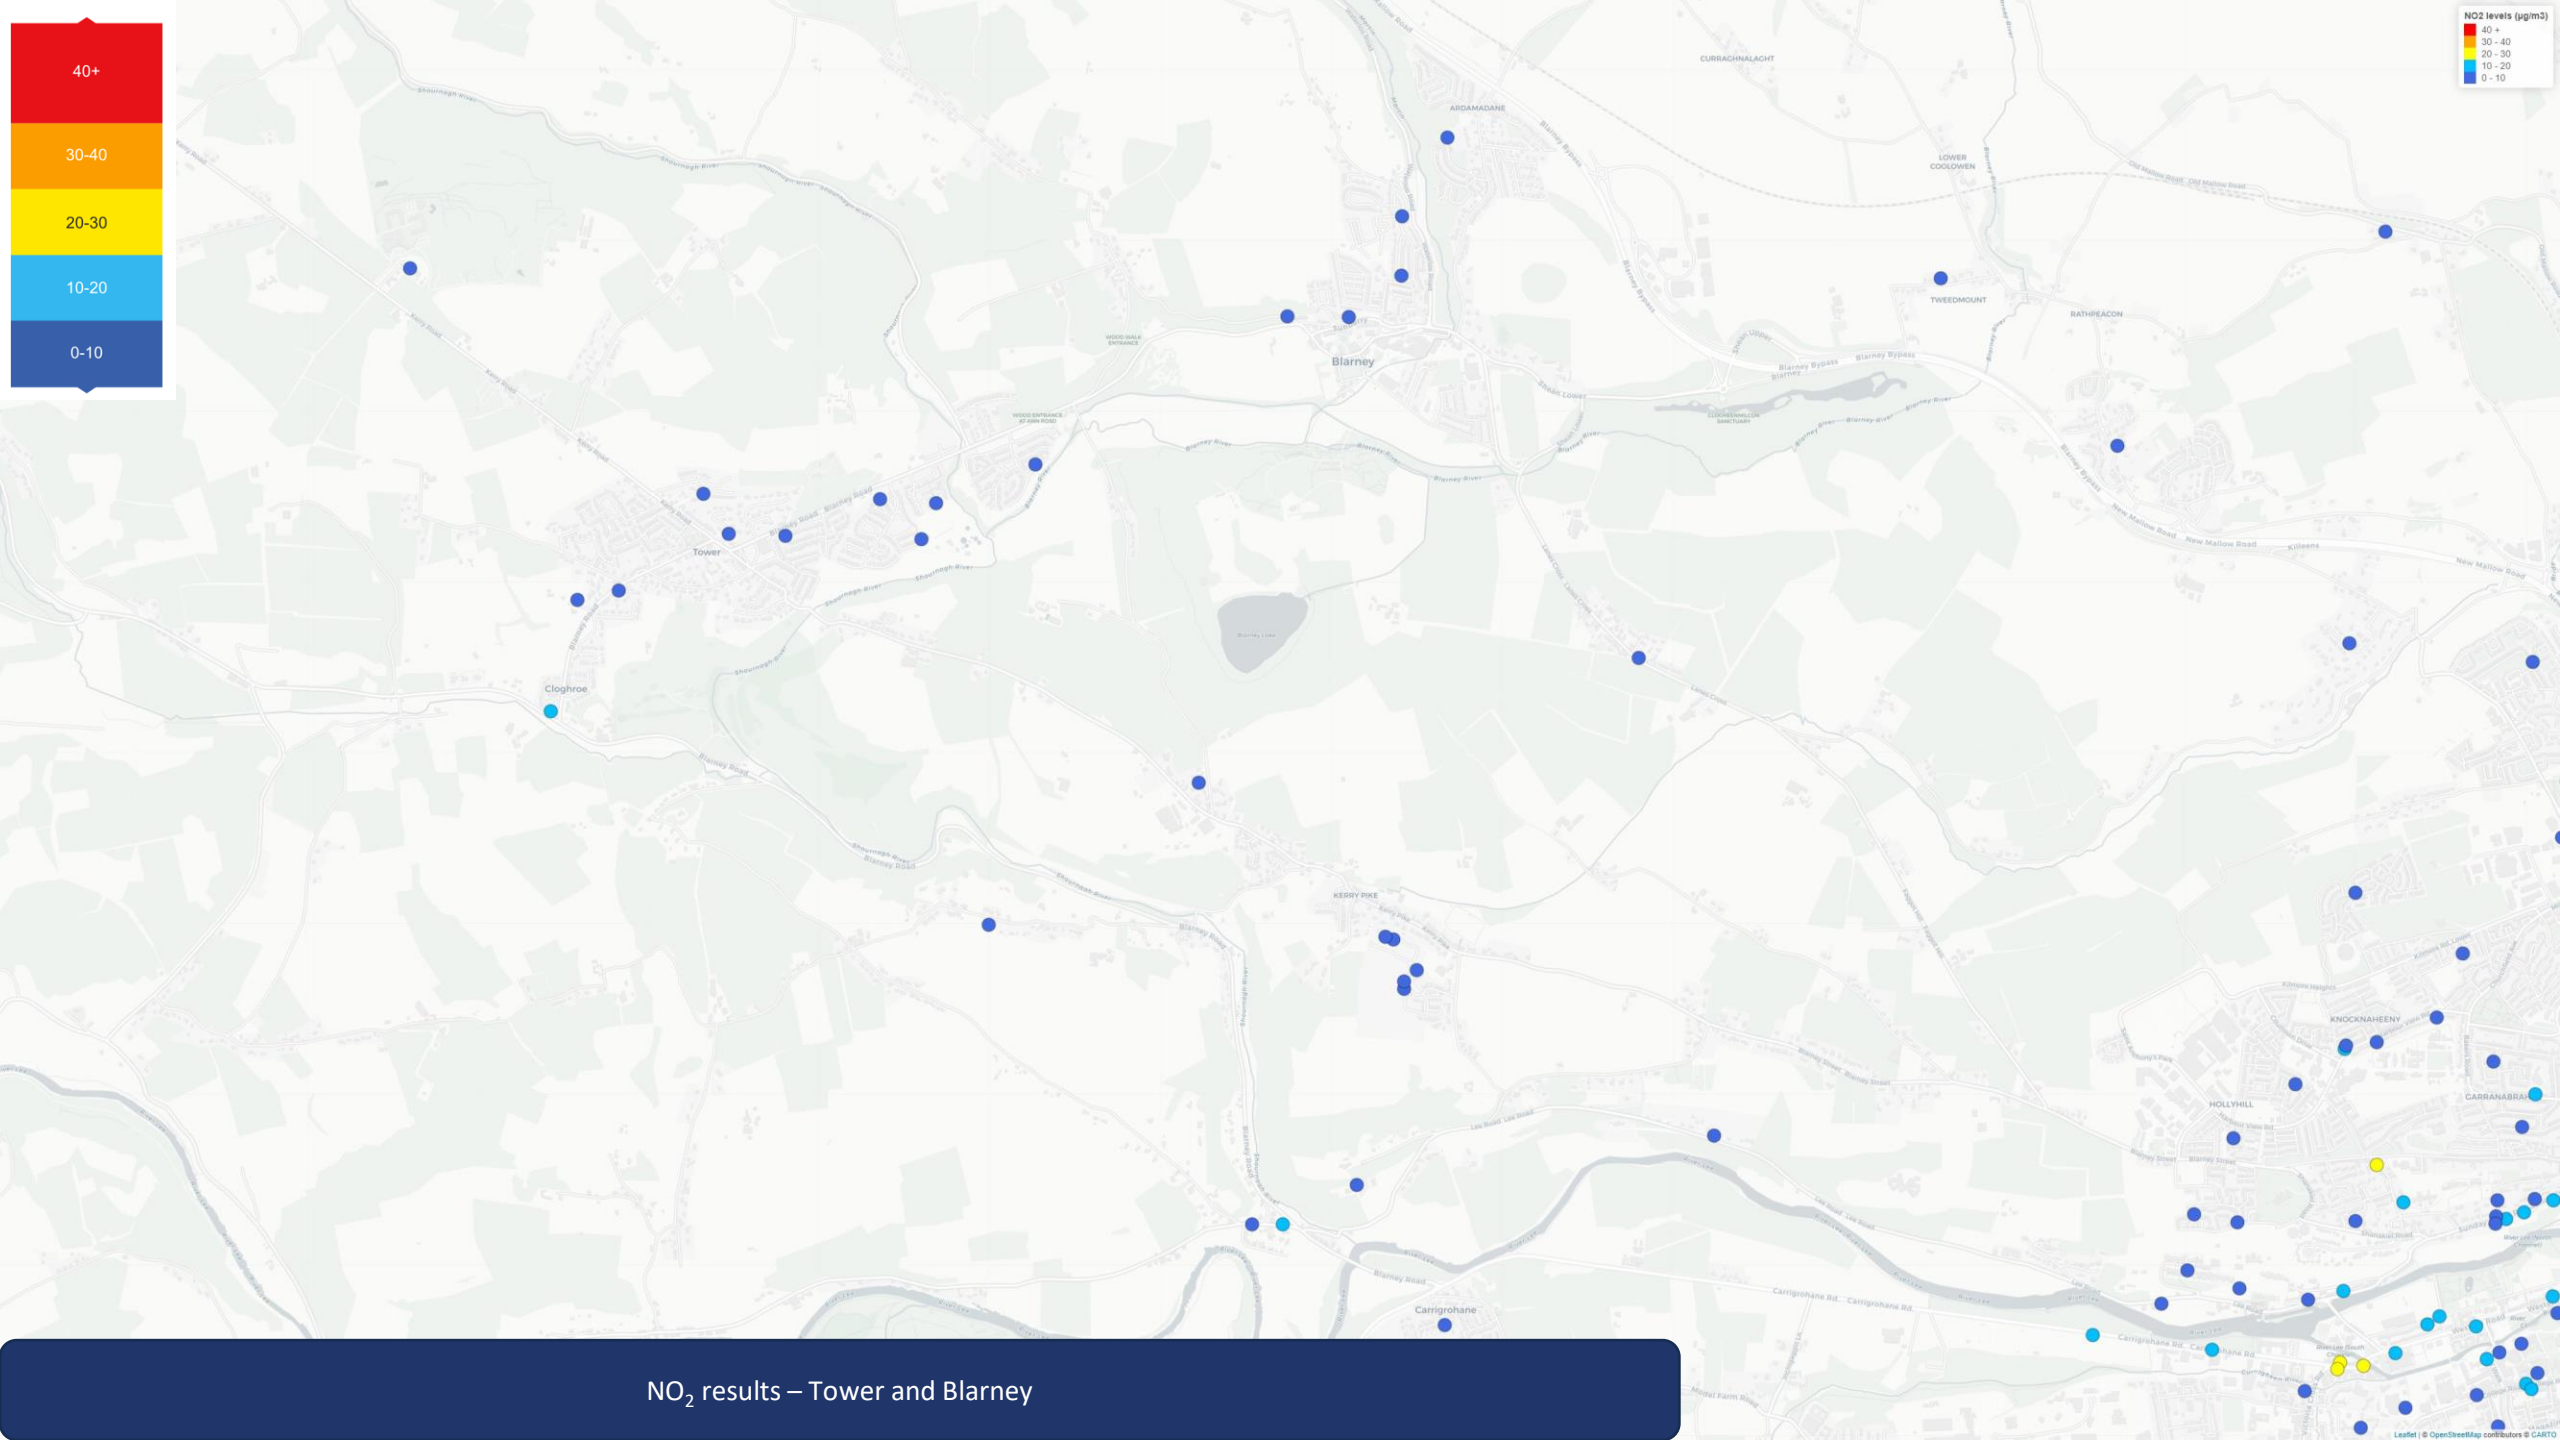

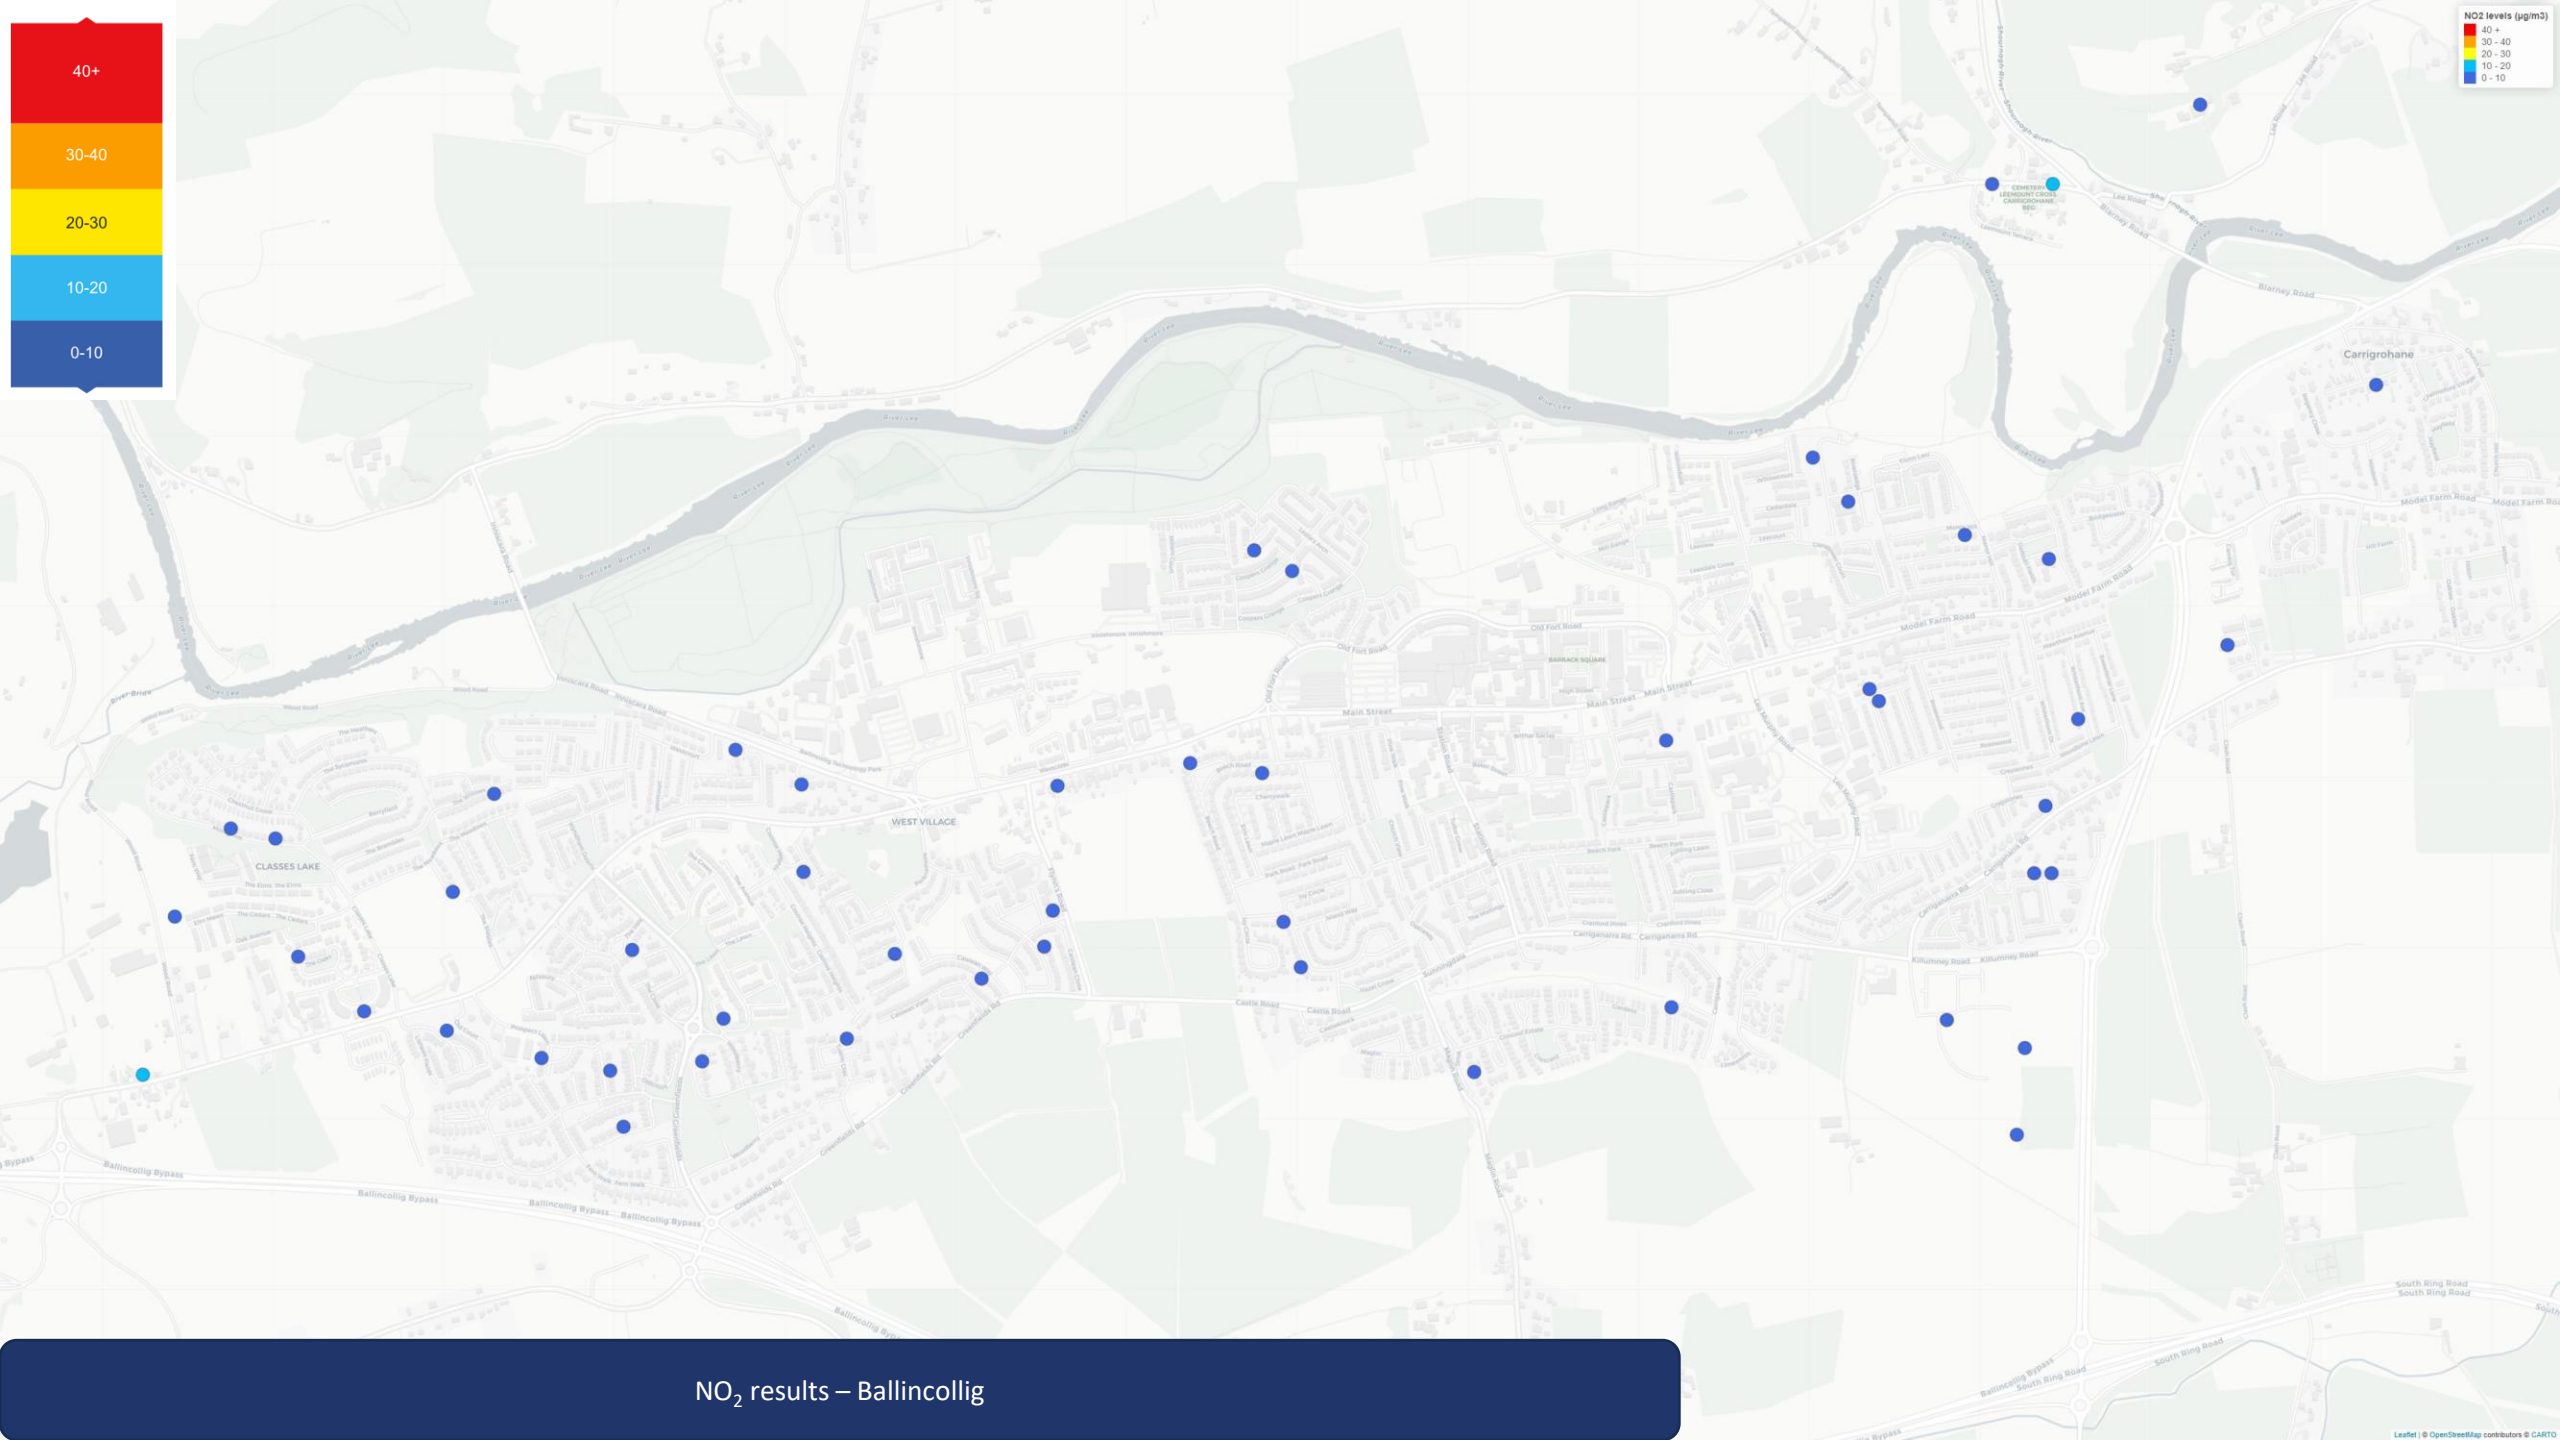

NO₂ results – Cork City South and Douglas

NO₂ results – Cork City South West

NO₂ results – Tower and Blarney

NO₂ levels (µg/m³)

NO₂ results – Ballincollig

A5 Cork City Council's Air Quality Strategy – Status of Objectives and Targets

Theme 1: Health and Well-being

- Summary
- Introduction
- Air Quality Monitoring in Cork City
- WHO and EU AQ Guidelines
- Monitoring of AQ Parameters
- Solutions and Alternatives for Cleaner Air
- Air Quality Initiatives in 2022
- AQ Data and Useful Links

Objective 1.1	Acquire feedback relating to the issue of air pollution in Cork City; including suggestions on how the Council and stakeholders could improve air quality across the city		
No.	Action	Timeframe	Status
1.1a	Carry out a public Air Quality Assessment Survey and make results available to the public.	July 2020	Complete
Objective 1.2	Develop awareness campaigns to inform the public of the dangers of air pollution and the steps that can be taken to reduce it. Incorporate data from Cork City Council funded studies to inform public at specific events		
No.	Action	Timeframe	Status
1.2a	Utilise website, social media and e-mail to update public on new findings relating to air pollution.	Short - Medium	Ongoing
1.2b	Commission development of training courses, workshops and materials on air pollution.	Short - Medium	Ongoing
1.2c	Organise and establish training and workshops as part of planned City Council Science and Civic events and festivals (as appropriate).	Short - Medium	Ongoing
1.2d	Develop air quality information materials (brochures, educational packs, information boards) and make available to schools, colleges, social/sports clubs.	Short - Medium	Ongoing
1.2e	Liaise with other local authorities and government bodies to designate a local Clean Air Day. This may be integrated with Cork Cycle Week and other similar initiatives.	Short - Medium	Ongoing

Objective 2.1	Develop an accurate and efficient air quality monitoring infrastructure in Cork city		
No.	Action	Timeframe	Status
2.1a	Install a local network of air quality monitors across the city.	2021 / 2022	Completed and ongoing
Objective 2.2	Make air pollution updates available to the public		
No.	Action	Timeframe	Status
2.2a	Create a localised web-based dashboard to deliver real-time air quality information.	2021	Completed and ongoing
2.2b	Produce an annual report for air quality in Cork City.	2022	Air quality brief published in April 2022. Full Air Quality Report for 2022 will be published in June 2023

Theme 3: Travel

Objective 3.1	Enhance bus connectivity and frequency		
No.	Action	Timeframe	Status
3.1a	Expand Park and Ride facilities across the city (Phase 1: Dunkettle).	Medium	Ongoing
3.1b	Prioritise bus network corridors: 1. East-West interim bus corridor following Light Rail corridor alignment; 2. Douglas Road and South Douglas Road Corridor; 3. N20 Mallow Road Corridor; 4. Summerhill North / Ballyhooly Road Corridor; 5. Hollyhill (Apple Campus) to City Centre; and 6. Dunkettle to City Centre.	Medium	Ongoing
3.1c	New bus lanes to be provided at Leirim St, Cathedral Walk, Coburg St, Devonshire St, Bridge Street, St Patricks Bridge (MacCurtain Street Public Transport Improvement Scheme).	Short - Medium	Ongoing
3.1d	Produce an annual report for air quality in Cork City.	Medium	Air quality brief published in April 2022. Full Air Quality Report for 2022 will be published in June 2023
Objective 3.2	Enhance Rail Infrastructure in Cork City		
No.	Action	Timeframe	Status
3.2a	Undertake Review of Suburban Rail Network to determine level of upgrades and new stations required.	Medium to Long	Ongoing
3.2b	Include Watergrasshill and Mallow within Leap Card discount range to promote commuting trips by rail.	Medium	Ongoing

Objective 3.3	Develop Travel Plan information for the public to offer alternative modes of travel		
No.	Action	Timeframe	Status
3.3a	Work with public transport providers to offer public transport discounts.	Medium	Ongoing
3.3b	Work with Transport Mobility Forum (TMF) to publicise change of mode travel options.	Short and Medium	Ongoing
3.3c	Conduct regular Staff Travel to Work surveys.	Short and Medium	Ongoing
3.3d	Develop targets to increase the number of staff walking, cycling to work and choosing healthy commuting options.	Medium	Ongoing
3.3e	Cork City Council has developed a working from home policy for its staff. The reduction in air emissions associated with the working from home policy shall be reported annually.	Medium	Ongoing
3.3f	Work with NTA to introduce a mobility card which allows access to shared bikes, train, bus and shared car systems rather than separate cards for each form of travel.	Medium	Ongoing
3.3g	Develop commuting transition plan for walk - cycle, walk/cycle-train/bus etc. to make change of modes more accessible, effective and attractive.	Medium	Ongoing
Objective 3.4	Reduce volume of traffic on City roads		
No.	Action	Timeframe	Status
3.4a	Develop a phasing in of non-vehicular roads within city centre.	Medium	Ongoing
3.4b	Ensure central roads within city and Tivoli docklands are solely for sustainable and active travel as per Area Based Transport Assessments.	Medium	Ongoing
3.4c	Carry out an investigation on the feasibility of reducing traffic speed to 30kph in built up areas.	Short to medium	Ongoing

Objective 3.5	Reduce emissions from Freight and Heavy Goods Vehicles		
No.	Action	Timeframe	Status
3.5a	Progress "last mile delivery" feasibility studies and projects for the city centre.	Medium	Ongoing
3.5b	Investigate the feasibility of a permit system for HGVs.	Medium	Ongoing
3.5c	Pilot a cargo bicycle grant scheme to increase more sustainable inner city delivery methods.	Medium	Ongoing
Objective 3.6	Expand the cycle network throughout the city and improve accessibility of Cycle lanes		
No.	Action	Timeframe	Status
3.6a	Expand electric bike charging facility.	Medium	Ongoing
3.6b	Increase the amount of cycle parking in the city, including for larger cargo bikes.	Medium	Ongoing
3.6c	Improve cycle hire provision.	Medium	Ongoing
3.6d	Apply a minimum cycling level of service to all streets.	Medium	Ongoing
3.6e	Promote cycle to work scheme.	Medium	Ongoing
3.6f	Continue to support Mobility Management Initiatives and other initiatives which support greater use of walking, cycling and public transport including Bike Week, European Mobility Week and other related promotions. Use the 'Cork City Cycling Strategy' and the 'Cork Cycle Network Plan' to help deliver this action.	Ongoing	Ongoing
3.6g	Continue development of the primary and inter-city cycle network, including 'Lee to Sea Greenway' from Ballincollig to Crosshaven and the Bandon Railway Line Greenway.	Short and Medium	Ongoing
3.6h	Align implementation of the cycling network with the implementation of the Bus-Connects network.	Medium	Ongoing
3.6i	Continue to promote the use of cycling including the delivery of infrastructure and facilities as part of Planning assessments.	Short and Medium	Ongoing

Objective 6.2	Enhance flora and fauna biodiversity in Cork city		
No.	Action	Timeframe	Status
6.2a	Follow new initiatives as outlined in 2021-2026 Heritage and Biodiversity Strategy.	2021 - 2026	Ongoing
6.2b	Identify locations to create new habitats for native flora and fauna e.g. urban orchards.	Short-Medium	Ongoing
6.2c	Identify potential ecological corridors to improve connectivity between green areas.	Short-Medium	Ongoing
6.2d	Engage with local voluntary groups to enhance new planting and re-wilding initiatives to increase green footprint of the city	Short-Medium	Ongoing
6.2e	Engage with local voluntary groups to enhance new planting and re-wilding initiatives to increase green footprint of the city	Short-Medium	Ongoing
Objective 6.3	Utilise nature based solutions (NBS) to improve air quality		
No.	Action	Timeframe	Status
6.3a	Install City trees (Air Quality Moss Walls) in the city centre to improve ambient air quality	2021 - 2026	Completed and ongoing
6.3b	Install 10 new parklets around the city	Short-Medium	Completed and ongoing
6.3c	Assess outcomes from Green and Blue Infrastructure study for Cork city and apply Nature Based Solutions to enhance air quality	Short-Medium	Ongoing

Theme 7: Research and Innovation

Objective 7.1	Assess levels of air pollution associated with traffic in Cork City		
No.	Action	Timeframe	Status
7.1a	Carry out an assessment using air quality monitors to determine the level of air pollution caused by traffic at varying times of the day. These readings will be used to generate an air quality map of the city.	2022	Completed and ongoing
Objective 7.2	Determine the benefits of introducing Low Emission Zones / Clean Air Zones in Cork city		
No.	Action	Timeframe	Status
7.2a	Commission a study on the potential for introducing Low Emission Zones / Clean Air Zones for air quality enhancement in the city.	Short	Completed and ongoing
Objective 7.3	Make available to the public real-time air quality information across Cork city		
No.	Action	Timeframe	Status
7.3a	Develop a dashboard for displaying real-time air quality information at the district level across Cork City	2022	Completed and ongoing
